Sl. No	Particulars		Justification
1a	Radiometer	<p>VLX-3WRadiometer V:3.0 Vilber radiometers record the intensity of ultraviolet radiation for a specific UV wavelength (long wave, short wave, medium wave). The intensity of UV radiation refers to the UV intensity and is measured in mW/cm². The VLX-3W radiometer indicates the amount of UV energy on a surface for a specific time. The data is defined in mJ/cm² (milli- Joule per square centimeter). Small and convenient, the VLX- 3W radiometer is of modular construction with a choice of three sensors to record UV radiation in the spectral range from 254nm to 365nm. With a wide measuring range from 0.1 to 250 mW/cm², our radiometers instantly indicate readings on a large LCD. Depending on the spectral range to be measured, a suitable sensor is attached to the VLX-3W base unit Silicon photocell for direct measurement of UV radiation. No conversion to visible light is required Interference filter to select the appropriate UV band and eliminate other unwanted radiation Not sensitive to infrared No electronic components in the sensor to avoid any temperature disparity Protection by quartz disc on the cellular filter Carbon-shielded cable (1 meter) Microprocessor controlled Designed to operate at 254 nm, 312 nm, or 365 nm</p>	The radiometer with sensor and calibrator shall help in the measurement of the energy in Kilo Joule falling into the surface area of mushroom
